

THE FORUM FOR EUROPE'S LANGUAGE TECHNOLOGY INDUSTRY

Press Release

12 LANGUAGE TECHNOLOGY COMPANIES WIN THE LT-INNOVATE AWARD 2012

BRUSSELS, 19 JUNE 2012

On 19 June 2012, over 160 key players of the Language Technology (LT) industry met in Brussels for the first LT-Innovate Summit.

The event showcased new technologies in LT and fostered venture capital investment opportunities. Most importantly, it successfully conveyed the message that Language Technologies are the missing piece in the puzzle of the EU's strategy for the Digital Single Market.

12 innovative LT companies win the LT-Innovate Award 2012

During the Summit, 30 promising companies presented themselves in front of a Jury of investors, entrepreneurs and experts in the LT field. The Jury picked the twelve best to win the LT-Innovate Award 2012.

The Winners were announced during the Gala Dinner and received their trophies from Members of the European Parliament Katarína Nevedalová, Amelia Andersdotter and Séan Kelly. MEPs stressed the importance of the sector for European innovation. The Winners are:

- [3DS Exalead](#), France
- [Bitext Innovations](#), Spain
- [Call Trunk Holdings](#), United Kingdom
- [Interverbum Technology](#), Sweden
- [Kwaga](#), France
- [LingleOnline](#), Ireland
- [Multilizer](#), Finland
- [NICE Systems](#), United Kingdom
- [TEMIS](#), France/Germany
- [Textkernel](#), Netherlands
- [XTM International](#), United Kingdom
- [Yocoy Technologies](#), Germany

The missing piece in the puzzle?

The Summit highlighted the fact that Language Technologies are the missing piece in the puzzle in Europe's Digital Agenda and called upon European politicians to pay more attention to the issue.

Philippe Wacker, Secretary General of [LT-Innovate](#), stated: "A multilingual infrastructure is as important for Europe as a broadband infrastructure! Making content produced in *any* language accessible to 500 million Europeans is the real opportunity in the decade ahead".

Jochen Hummel, LT-Innovate Chairman and CEO of [ESTeam](#) emphasized: "What we need in Europe are language highways! They are essential to enable innovation and promote inclusion".

Prof. Hervé Bourlard, chairman of [IDIAP](#) and Founder of successful LT startup [Koemei](#) provided an important clue as to how this could be achieved: "Europe's investment in pipes should go hand-in-hand with an investment of substantial magnitude into creating multilingual conversational middleware that would allow people to access content generated by anybody, anywhere, anytime, seamlessly through any device and in any language of their choice".

Jochen Hummel concluded: “The language infrastructure is an important piece of enabling technology that the EU should procure as soon as possible. It would be a major booster for the European content economy with positive spill-over effects for almost every segment of the economy and society at large”.

Background information

What are Language Technologies (LT)?

LT is the branch of information technology that deals with natural language information. It can roughly be split into three segments: intelligent content, translation and speech.

LT Innovate – The Forum of Europe’s Language Technology Industry

LT-Innovate was founded in January 2012 as The Forum for Europe’s Language Technology Industry. As of June 2012, it gathers 100+ European companies – mostly small and medium-sized - developing products using intelligent content, speech and translation technologies.

LT-Innovate provides a collaborative platform through which members can:

- Stay informed with latest news, views and developments in the European LT industry;
- Gain access to market analysts who will provide concrete data on the LT industry and forecast future trends;
- Engage in discussions, identify opportunities and solve problems through collaborating in industry-driven Special Interest Groups (SIGs);
- Provide collective feedback to policy makers at national and European level to shape future policies and programmes.
